Subject: FW: new EPA glycol method
EPA-600-R-14-008-glycols method study 7-9-14.pdf

Mark, I just received from the attached report that documents the HPLC-MS-MS method for glycols analysis that EPA used in sampling the Pavillion monitoring wells and a small number of domestic wells. The method was verified by multiple labs as part of the validation process- you'll see that one of the labs involved was Test America in the Denver area. I am also trying to get a copy of the Standard Operating Procedure developed by EPA's Region 3 laboratory who pioneered this method and has been using it the longest. If I am able to get that, I will send it along. Hope this helps you plan for your sampling. Please feel free to call if you need anything else,

Subject: new EPA glycol method

Good afternoon Martin, hope all is well down that way - other than the Rockies that is....
geesh...

We have been researching the new glycol method for the Pavillion project and are not finding where the method has become "official". Doesn't it have to be published in the Federal Register to become official? or something to that affect? We (Nicole in the Cheyenne office) have only found two labs that are even doing it - and when she talked with them it sounded like it was still kind of experimental or custom?

So I was wondering if you could point me in the right direction to find out how we can get this run during our next event - if it is official that is. Is your Dever lab doing it? Or is there another EPA lab that might do the analysis for us?

Thanks for the help,

Mark
